Backbone counts. Whether you're tying a dozen flies a year—or a million dozen. That's why we base more than 1,500 Umpqua Feather patterns on the superior "Umpquality" of Tiemco hooks. They're perfectly tempered from Japanese steel. Superbly engineered for excellent balance and strength, and chemically sharpened for extra penetration. Always go with "Umpquality", and never settle for less than Tiemco.

## New! Tiemco Hook Points

In addition to the outstanding standard hook points, Tiemco introduces two innovative speciality points: The Tiemco SP hook design features a modified triangular point with a flat, curved, inner surface. The result is a long, razor-sharp point with dramatically improved penetration properties. Similar to the SP point, the Tiemco TC hook point is a modified triangular shape designed for super penetration on every hook set. It has a smooth inner surface and a grooved outer surface for extra strength and penetration.
